Relative Rate Index (RRI) provides a single index number that indicates the extent to which the volume of contact or activity differs for minority youth and white youth. RRI is calculated as the percent of activity involving minority youth divided by the percent of activity involving majority (White) youth. This is the methodology recommended by the USDOJ Office of Juvenile Justice and Delinquency Prevention, to address the question of disparity. RRI may better be explained by an example. If 1 student of a minority group is excluded and there are 10 minority students of that group at that school, the percent shows as 10%. If there were 3 White students excluded and there were 300 White students in that school the percentage shown would be 1%. The relative rate for this would be calculated as 10, which is 10% divided by 1%. If either group has less than 6 total students in the school, the RRI is not calculated.
